

# RECIPROcity

## A short overview

## Objective

The RECIPROcity project will support at least 20 cities across Europe, of varying size and mobility demand, by developing and implementing a four-stage replication framework:

- **IDENTIFY** the right innovative mobility solutions and relevant stakeholders according to different local contexts;
- **LEARN** about requirements, processes, skills and needs for a successful implementation of these solutions in the involved cities through capacity building and knowledge exchange;
- **ACCELERATE** the implementation and deployment of the identified solutions through guidance and matchmaking for business and finance;
- **SHARE** and build upon lessons learnt and best practices to enable fast wide-scale replication through reciprocal knowledge exchange and partnerships.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 101006576
